

*P. nanus*, *Nephtropsis atlantica*. Molluscs: *Dentalium caudani* and others.  
Sponges: *Pheronema carpenteri* (see Fig. 383).

FIG. 381.

*Stephanotrochus diadema*, Moseley. "Michael Sars," 1902, 750 metres.

This list is very far from complete, but it shows what a number of forms there are which do not belong to the Norwegian Sea.

FIG. 382.

*Flabellum* sp. "Michael Sars," 1910, Station 101, 1853 metres.

Besides these specifically Atlantic forms, the fauna on the southern slope of the ridges and plateaus comprises others familiar to us from the boreal region of the Norwegian Sea, and from the North Sea, where they occur either on the plateaus or in the deeper parts of the fjords, including:—
