

**Agaricus (Eccilia) rhodocylix**, Lasch.

*Agaricus (Eccilia) rhodocylix*, Lasch in Linnæa, iv. n. 567; Fries, Hymen. Europ., p. 213; Cooke, Illus., t. 343, B.; Berk. in Journ. Linn. Soc. Lond., xiv. p. 351.

BERMUDAS.—On the ground—*Moseley*.

Northern Europe; also occurring in Cuba.

**Agaricus (Galera) tener**, Schæff.

*Agaricus (Galera) tener*, Schæff., Ic. Fung. Bav., t. 70, figg. 6–8; Bull., Champ., t. 535, fig. 1; Berk. in Journ. Linn. Soc. Lond., xiv. p. 351.

BERMUDAS.—On the ground—*Moseley*.

Widely dispersed in north temperate regions, and occurring in Tasmania, Australia.

**Agaricus (Panæolus) papilionaceus**, Bull.

*Agaricus (Panæolus) papilionaceus*, Bull., Champ., t. 561, fig. 2; Fries, Hymen. Europ., p. 311; Berk. in Journ. Linn. Soc. Lond., xiv. p. 351.

BERMUDAS.—On dung—*Moseley*.

Europe; India; United States; Natal; Australia.

**Marasmius sabali**, Berk.

*Marasmius sabali*, Berk. in Journ. Linn. Soc. Lond., xv. p. 49.

Pileo reniformi tomentoso, demum resupinato; stipite brevissimo; lamellis distantibus adnatis postice rotundatis crassiusculis integerrimis, interstitiis venosis.

BERMUDAS.—Endemic. On leaf-stalks of *Sabal*—*Moseley*.

Pileus probably white when fresh; but the whole plant, when dry, is of a pinkish buff, soon resupinate, then at length sulcate; spores subglobose, 0·00028 inch long, hollowed out on one side.

**Marasmius obscuratus**, Berk. et Broome.

*Marasmius obscuratus*, Berk. et Broome in Journ. Linn. Soc. Lond., xiv. p. 38, et Berk., l. c., p. 351.

BERMUDAS.—On bark—*Moseley*.

Either opaque or transparent, minutely pulverulent, gills broad. I can find no distinguishing character between this and the Ceylon species.

Ceylon.

**Marasmius bermudensis**, Berk.

*Marasmius bermudensis*, Berk. in Journ. Linn. Soc. Lond., xv. p. 49.

Pileo convexo pulverulento albido subsulcato, margine inflexo; stipite brevi sursum pellucido, deorsum pulverulento; lamellis distantibus breviter adnatis, interstitiis lœvibus.

BERMUDAS.—Endemic. On dead coffee-wood, Paynter's Vale—*Moseley*.

Pileus about one line across; stem quarter to half an inch high; gills, when dry, pale tawny, with a white edge.
