D.  $\frac{1}{2}$ , A. 20. The length of the head is a little more than the depth of the body and one-fifth of the total. Snout with the upper profile obliquely descending forwards. The canine teeth of the lower jaw are very large, those of the upper small. Orbital tentacle none. Diameter of the eye equals the width of the interorbital space. The dorsal fin is not elevated, commences on a line with the posterior margin of the preoperculum, and terminates at a short distance from the root of the caudal. The upper and lower caudal rays prolonged into filaments. Uniform light olive coloured in spirits. Ovalau. Length of specimens,  $2\frac{1}{2}$  and 3 inches.
