

kindly permitted me to make use of them here. They are distinguished by the initials "W. B. C."; while thirty-one of the remaining thirty-six which are marked "P. H. C.," have been drawn under my own superintendence by Messrs. C. Berjeau, F.L.S., and P. Highley. I am very greatly indebted to both these gentlemen for the care and skill with which they have performed a difficult and laborious task, one, moreover, involving a considerable acquaintance with minute structural details. I am under similar obligations to Mr. George West, who lithographed three anatomical plates, and also gave me valuable information respecting the specimens from which he had drawn several plates for Sir Wyville Thomson. I have likewise to thank Mr. Black for similar information concerning those plates which had been drawn by himself; and also Mr. W. E. Hoyle, M.A., of the Challenger Office, for kindly working out the magnification of some of the figures upon Mr. Black's plates.

I have further gratefully to acknowledge much valuable bibliographical assistance from my friends Prof. F. J. Bell, F.Z.S., and Mr. W. P. Sladen, F.L.S.; while my thanks are also due to Prof. H. N. Moseley, Dr. P. P. C. Hoek, Mr. H. B. and Dr. G. S. Brady, and to Mr. Edgar Smith, F.Z.S., for kindly identifying various organisms which I had found attached to different parts of the Crinoids.

Prof. Carl Zittel of Munich and Prof. G. Meneghini of Pisa have been good enough to send me several fossil specimens of *Rhizocrinus* for examination, and I take this opportunity of thanking them. But I find it difficult to express my indebtedness to Mr. Charles Wachsmuth of Burlington, Iowa, U.S., who is so well known as the leading authority upon the Palæocrinoidea. Not only has he frequently sent me for examination very rare and valuable specimens illustrating the morphology of the Palæocrinoids and Blastoids, but he has repeatedly answered my inquiries in the fullest and most complete manner possible. The relations of the Neocrinoids and the Palæocrinoids have been the subject of a prolonged discussion between us, extending over more than two years; and it is a matter of sincere regret to me that we have been obliged to agree to differ. Time will show how far our respective views will need modification. We have approached the subject from different sides; but upon one point we are in complete accord, viz., the desire to find out the truth, whether or not it agree with our own ideas upon the subject. Mr. Wachsmuth will shortly publish an explanation of his own position, to which I would refer those who are interested in the matter.

In conclusion, I must express my sincere thanks to Mr. John Murray and to Prof. Alexander Agassiz for having entrusted me with the working out of the Crinoid collections in their charge, and for their readiness to afford me every possible assistance in doing so; while I would pay a heavy debt of gratitude to the memory of the late Sir Wyville Thomson. It was my privilege to accompany him and my father in the short but eventful cruise of H.M.S. "Lightning" in the year 1868 and in the "Porcupine" expedition of 1869; and to his kindness and encouragement both then and sub-
