

PLATE XIV.

- Fig. 1. Dorsal view of *Polynoë magnipalpa* (male), . . . Enlarged.
- Fig. 2. Head and anterior dorsal view of *Allmaniella setubalensis*,<sup>1</sup> . . . Enlarged.
- Fig. 3. Dorsal view of the head of *Lænilla fusca*,<sup>2</sup> . . . Enlarged.
- Fig. 4. Anterior dorsal aspect of *Polynoë (Robertianella) synophthalma*, . . . Enlarged.
- Fig. 5. Head and anterior dorsal region of *Polynoë (Admetella) longipedata*. The proboscis is seen slightly extruded between the bases of the palpi. The processes at the base of the tentacle have been removed, . . . Enlarged.
- Fig. 6. Dorsal view of a female *Polynoë magnipalpa*, . . . Enlarged.

<sup>1</sup> The engraver has made the lines and shading on the dorsum too formal.

<sup>2</sup> The engraver has erroneously indicated the shading round the posterior eyes.
