

middle. Pretty strong, polished, and translucent white, with an opaque band close to the apex. *Sculpture*: None. *Mouth* large, very slightly oblique; edge thin and chipped. *Apical opening* slightly oval, small, straight, roughened, narrowed inside by a flat, concentrically puckered, and margined ring, which occupies nearly half its diameter (0.014 and 0.006). The margin (about 0.001 thick) of this ring is formed by the projecting end of a short pipe (about 0.005 long), which passes up into the interior of the shell. L. 0.08 in. B. at mouth 0.02, at broadest 0.047; at apex 0.016.

This species is not only much smaller than *Cadulus ovulum*, Phil., from the Mediterranean, but is obviously very different in form and proportions. It differs from *Cadulus exiguus*, Wats., in being much rounder, has no tube anteriorly, is not nearly so elongated posteriorly, and is provided with a distinct posterior pipe.
