

This species has some faint resemblance to *Scalaria nana*, Jeffr., but is much squatter, with a shorter base and a blunter apex. It is certainly an exceptional form for the genus under which it is placed, but I know no better place for it.

Station VII. February 10, 1738. Lat.  $28^{\circ} 35'$  N., long.  $16^{\circ} 5'$  W. Tenerife. 78 fathoms. Volcanic sand.

*Habitat*.—From the Orkneys to the Canaries and the entire Mediterranean basin (Jeffreys).<sup>1</sup>

<sup>1</sup> Dr Gwyn Jeffreys refers this species to the West Indies on the authority of M. Petit de Saussaye, *Journ. de conch.*, vol. ii., 1851, p. 428, but the species was probably not well determined, as it does not appear in Dr Fischer's later catalogue of the same collection (M. le Commandant Beau's), published in the *Revue coloniale*, Paris, 1857, but is replaced by *Phasianella tessellata* (*sic*), C. B. Ad., *Phasianella zebra*, D'Orb., and *Phasianella umbilicata*, D'Orb.
