Station 75. July 2, 1873. Lat. $38^{\circ} 38'$ N., long. $28^{\circ} 28' 30''$ W. Fayal, Azores. 450 fathoms. Volcanic mud.

Station 122. September 10, 1873. Lat. $9^{\circ} 5'$ S., long. $34^{\circ} 53'$ W. Off Pernambuco. 350 fathoms. Red mud.

Habitat.—Mediterranean, 0 to 250 fathoms (Jeffreys).

Fossil.—From the Middle Miocene onwards (Bellardi), Pleistocene (Weinkauff).

The Marquis of Monterosato (Enumerazione, p. 45) says that the living Mediterranean species *Pleurotoma loprestiana*, Calc., has been confounded with the *Pleurotoma crispata*, Jan. If I have not followed him here it is merely because I do not know the limits of the two species, and therefore think it safer to follow the nomenclature of the British Museum, which has specimens under the name of Jan's species, and it is with these that the Challenger shells agree.

2. *Clathurella formosa* (Jeffreys).
