

PLATE LXXI.

*Sergestes prehensilis* (p. 385).

Fig. 1. Lateral view ; enlarged twice.

*a.* Ophthalmopod

*b.* First antenna.

*d.* Mandible or siagon.

*e.* First siagnopod.

*f.* Second siagnopod.

*g.* Third siagnopod.

*k.* First pereiopod ; showing the prehensile character of the ultimate articulation.

P. Pereion detached, with gnathopoda *h, i*, and pereiopoda *k, l, m, n, o*, connected, the larger branchial plumes removed to show the position of their attachment to the somite and the rudimentary form of the pleurobranchia.
