

PLATE XCII.

Figs. 1-8. *Cyrtaulon solutus*, F. E. S., PAGE
333

Fig. 1. A dried specimen in the tubular cavity of a piece of limestone; natural size.

Fig. 2. Transverse section of a broad flat beam of the body, showing the dictyonal framework and the loose spicules in their natural position; $\times 50$.

Fig. 3. Small uncinatum; $\times 450$.

Fig. 4. Hexaster-like spicule with a long stalk; $\times 300$.

Fig. 5. Dermal scopula with four strong, barbed, unknobbed prongs; $\times 300$.

Fig. 6. Dermal scopula with six small, slight, knobbed prongs; $\times 300$.

Fig. 7. Gastral scopula with four strong, barbed, unknobbed prongs; $\times 300$.

Fig. 8. Uncinatum; $\times 100$.

Fig. 9. *Cyrtaulon sigsbeeii*, O. Schmidt, 333

Fig. 9. Macerated fragment, from a photograph; natural size.

The old generic name *Volvulina*, O. Schmidt, which was applied to a Gastropod in 1865, was erroneously retained on the Plate.
