

PLATE XL.

	PAGE
Figs. 1, 2. <i>Anthastra parvispicula</i> ,	145
Figure 1. A poral chone in transverse section, to show the position of two supposed æsthocytes; × 73. The æsthocytes are indicated by two dashes on the right of the figure, slanting downwards towards a recess in the chone.	
„ 2. Part of the preceding, more highly magnified, to show the supposed æsthocytes, which present a somewhat darker tint than the other cellular constituents of the tissue; × 292.	
Figs. 3, 4. <i>Cydonium glariosus</i> ,	223
„ 3. Transverse section through the cortex and adjacent choanosome, showing embedded sand grains and pencils of small oxeas; × 32.	
„ 4. Tangential slice from the surface of the sponge, showing the pores, and the asters below the epithelium; × 180.	
Fig. 5. <i>Craniella simillima</i> ,	30
„ 5. Longitudinal median section through the solid planula; × 73. The columnar cells of the outer layer are shown more highly magnified above the chief figure; × 430.	
Fig. 6. <i>Characella aspera</i> ,	92
„ 6. The sponge; nat. size.	
Fig. 7. <i>Placospongia carinata</i> ,	272
„ 7. Transverse section; × 10.	
Fig. 8. <i>Astrella vosmaeri</i> ,	136
„ 8. Transverse section through the cortex, showing the characters of the chones; × 51.
