

1863. SARS, M.

Zoologiske Notitser fra Christiansund og Bejan. Nyt Magazin for Naturvidenskaberne. Tolvte Binds tredie Hefte. Christiania, 1863.

At page 290 he records "*Æginella spinosa* A. Boeck. Ikke sjelden mellem Sertulariner paa 30-40 F. D. ved Bejan. Det levende Dyrs Farve er hvidagtig og stærkt marmoreret eller plettet med rustbruunt, Øinene minierøde."

1863. SARS, GEORG OSSIAN, born 1837 (G. O. Sars).

Beretning om en i Sommeren 1862 foretagen zoologisk Reise i Christianias og Trondhjems Stifter. Nyt Magazin for Naturvidenskaberne. Tolvte Binds tredie Hefte. Christiania, 1863. pp. 193-252.

Pages 205-212 relate especially to the fresh-water Amphipoda observed on this journey. First Sars discusses *Pontoporeia femorata*, Krøyer, Var., to which he strongly inclines to make *Pontoporeia affinis*, Lindström, a synonym. Secondly, he gives a full description of a species under the following heading, "*Gammarus pulex* De Geer, an a specie vulgo hoc nomine descripta diversus?" As to its *habitat* he says, "har jeg altid kun truffet vor *Gammarus* in større stillestaaende Vande, aldrig i Elve." If it should prove a distinct species, he proposes to name it in correspondence with its habitat *Gammarus lacustris*, a name which he afterwards changed to *Gammarus neglectus*. Thirdly, he describes "*Gammarus cancelloides* Gerstfeldt, Var. (?)." This form, he says, had been already described by A. Boeck as a new species, under the name *Gammarus quadrispinosus*. It is rather in deference to Lovén's opinion, than upon his own judgment, that he hesitates to accept Boeck's view.

1863. STIMPSON, WILLIAM.

Synopsis of the Marine Invertebrata collected by the late Arctic Expedition under Dr. J. J. Hayes. From Proceedings of the Academy of Natural Sciences of Philadelphia, May, 1863.

The Amphipods recorded are *Anonyx ampulla*, Krøyer, which is a synonym to *Anonyx nugar*, Phipps; *Pherusa tricuspis*, n. s., which is identified by Boeck with *Amphithoë fulvocincta*, M. Sars, 1858, under the name *Halirages fulvocinctus*; *Gammarus locusta*, J. C. Fabr. and *Themisto arctica*, Krøyer? *Gammarus pulex*, Stimpson, from Grand Manan, is here placed as a synonym to *Gammarus locusta*, Fabr.

1864. BATE, C. SPENCE.

Characters of New Species of Crustaceans discovered by J. K. Lord on the coast of Vancouver Island. [From the Proceedings of the Zoological Society of London. December 13, 1864.] pp. 662-668.

A new species "*Mœra fusca*," is thus described:—"The body is long and slender; the superior antennæ are about half the length of the animal, the peduncle being scarcely longer than
