

- Manganese nodules, analyses of, 363, 370-371, 417-423, 453, 464-488.
- „ „ chemical composition of, 368-371.
- „ „ microscopic characters of, 367-368.
- „ „ mode of occurrence of, 341-367.
- „ „ origin of, 372-378.
- „ „ qualitative analyses of, 418-419, 468-469.
- „ „ quantitative analyses of, 419-423, 469-470.
- „ „ spectroscopic examination of, 417-418.
- „ „ state of oxidation of manganese in, 470-471.
- Manganese ore, bog, 371.
- „ peroxide (see Manganese).
- Manganite, 369.
- Manila, deposits between Hong Kong and, 100-101.
- „ „ „ Samboangan and, 98-103.
- „ „ off, 100-101.
- Manila Harbour, deposit in, 100-101.
- Mantell, G. A., xxiv.
- Marble, xx.
- Marginulina*, 46.
- Marine deposits in general, 184-188.
- „ fauna and flora in general, 249-253.
- Marion Island, deposits between Cape of Good Hope and, 74-77, 160-161.
- „ „ deposits between Crozet Islands and, 76-79, 161.
- „ „ deposits off, 76-77, 161.
- Marls, xxviii, 384.
- Marshall, T. R., 421.
- Marsilli, L. F. comte de, xix.
- Marsipella*, 263.
- Massa Island, xxi.
- Materials available, 29.
- „ derived directly from the solid crust of the earth, 291-326.
- „ of organic origin in deep-sea deposits, 249-290.
- Maury, M. F., xxiv, xxv.
- Mean depth (see Average depth).
- Meangis Island, deposits between Admiralty Islands and, 174.
- Mediterranean Sea, xiii, xxii, xxiii, 382.
- “Medusa,” the, 251.
- Megasthenes, xviii.
- Melbourne, deposits between Heard Island and, 163-164.
- Melbourne, deposits between Sydney and, 82-83, 165.
- „ deposits between Termination Land and, 80-83.
- „ rock fragments obtained between Heard Island and, 322.
- Meldrum, C., 294.
- Meroplanktonic, 261.
- Mesoplodon*, 179, 271, 272, 347.
- „ *layardi*, 271, 272.
- Messier Channel, deposits in, 182.
- Metallic iron, 356.
- „ nuclei of magnetic spherules, 328.
- Metamorphic quartzite, 322.
- Metasilicate, 432, 463.
- Meteoritic iron, 328, 329, 330.
- „ of Santa-Catarina, 330.
- Meteorites, 328, 329, 330, 336.
- „ chondres of, 330, 331.
- Methodical description of Challenger deposits, 33-147.
- Methods of chemical analysis, 27.
- „ obtaining deposits, 1.
- „ study of deposits, 11.
- Meunier, S., 334.
- Meynard, M., xviii.
- Mezorostral bones of *Ziphius*, analyses of, 491, 494, 495.
- Mica, 21, 217, 226, 231, 318, 322, 325, 354.
- „ black, 296, 320, 322, 396.
- „ white, 322, 325, 326, 383, 384, 389.
- Micaceous sandstone, 211, 322.
- Mica-schist, 152, 163, 195, 322, 325, 383, 389.
- Microcline, 20, 217, 325, 326.
- Microscopes used on board the Challenger, 11.
- Microscopic characters of glauconite, 381-382.
- „ „ manganese nodules, 367-368.
- „ „ phosphatic concretions, 393-395.
- „ examination of deposits, 14, 27.
- Miliolidæ, 34-146, 193, 216, 225, 230, 289.
- Miliolina*, 34, 38, 44, 46, 50, 52, 54, 56, 58, 60, 62, 64, 66, 70, 72, 74, 80, 84, 98, 100, 102, 106, 114, 116, 117, 142, 144, 146, 162, 165, 193.
- „ *seminulum*, 130, 134, 263.
- „ *venusta*, 104.
- Millepora*, 78, 144, 145.
