Depth (2450 fathoms) ; deposit, Globigerina Ooze, containing 83·13 per cent. of carbonate of lime (see Murray and Renard, Deep-Sea Deposits Chall. Exp.).

At 5.40 A.M. stopped to dredge and obtain temperatures in the same position as Station 102 of August 21, 1873, about 430 miles W.S.W. of Cape Palmas. At 6 A.M. put over dredge, veering 3000 fathoms. Took serial temperatures down to 1500 fathoms. At 11 A.M. commenced heaving in dredge, which came up at 2 P.M. with very few specimens, but the dredge and attached tow-net contained over eleven litres of the deposit. At 2.10 P.M. proceeded under steam. One Thalassidroma was seen.

Cape Verde distant at noon, 714 miles. Made good 110 miles. Amount of current 6 miles, direction N. 39° W.
