

which resemble types to be found along the south-eastern border of the Highlands and the north of Ireland. Indeed, some may have been derived from the south of Ireland.

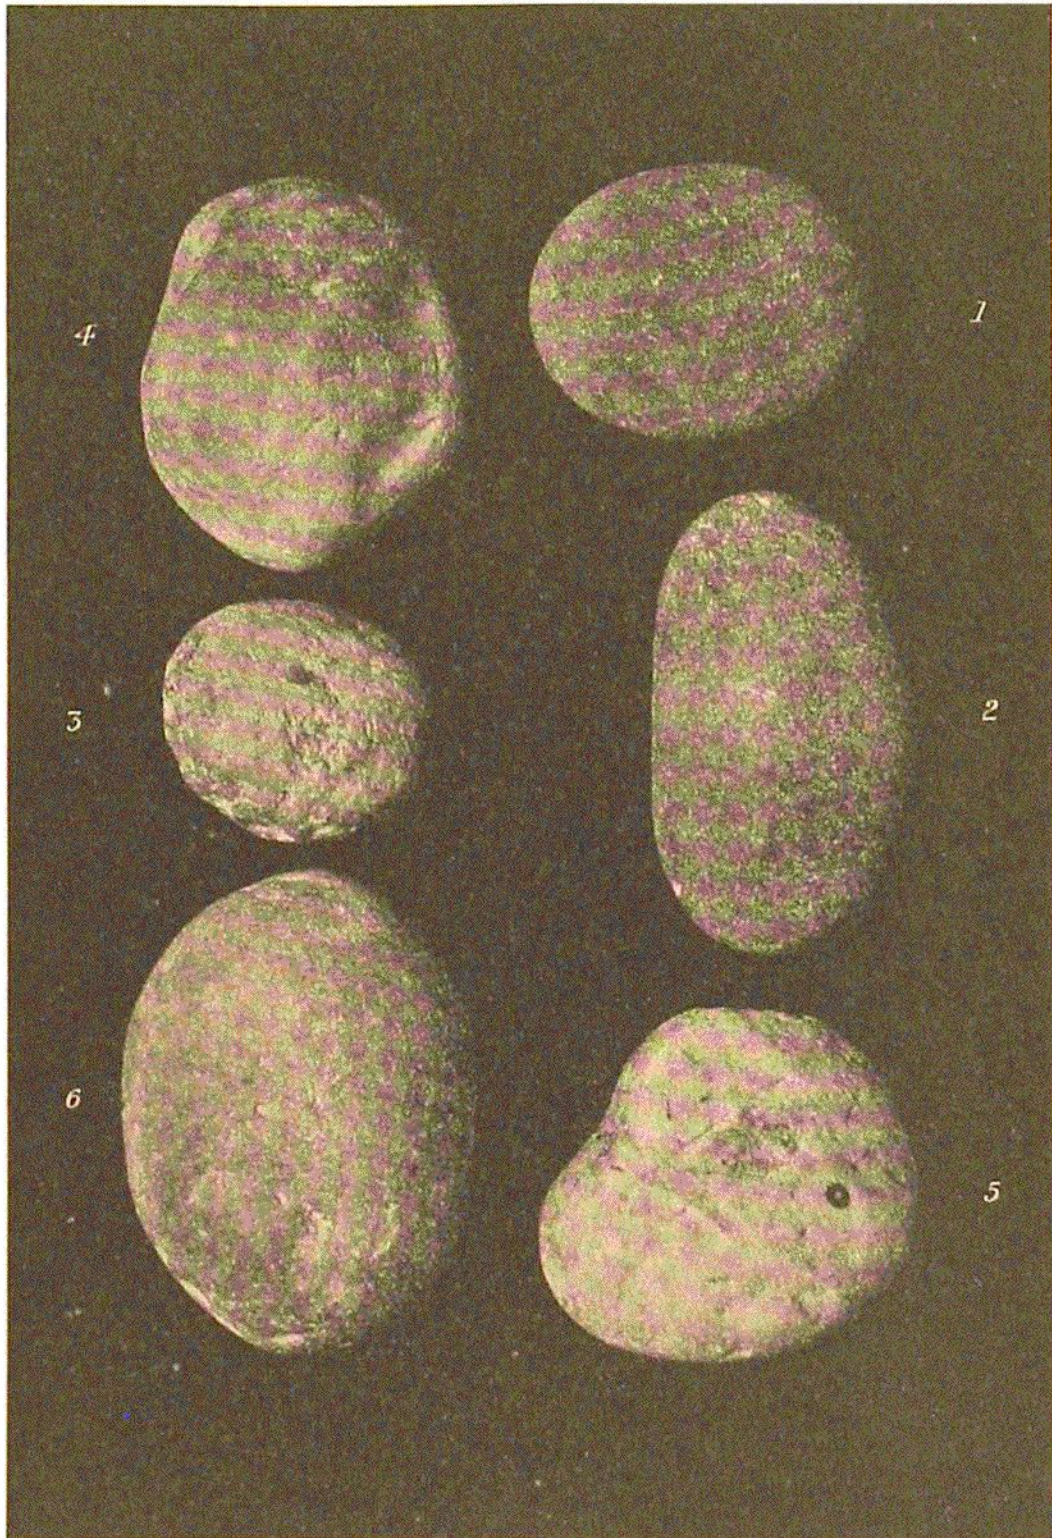

FIG. 146.—ROUNDED STONES FROM "MICHAEL SARS" STATION 95.

The evidence furnished by the igneous materials is no less remarkable. The plutonic rocks are represented by granites resembling those of Lower Old Red Sandstone age in Scotland and the north of Ireland, and also by a specimen of nepheline-syenite which cannot be matched
