

*tenuispinus*, also found on the plateaus and in the Norwegian depression, the whitish-yellow *Bathybaster vexillifer* (see Fig. 359, which in the cold area takes the place of *Psilaster andromeda*,

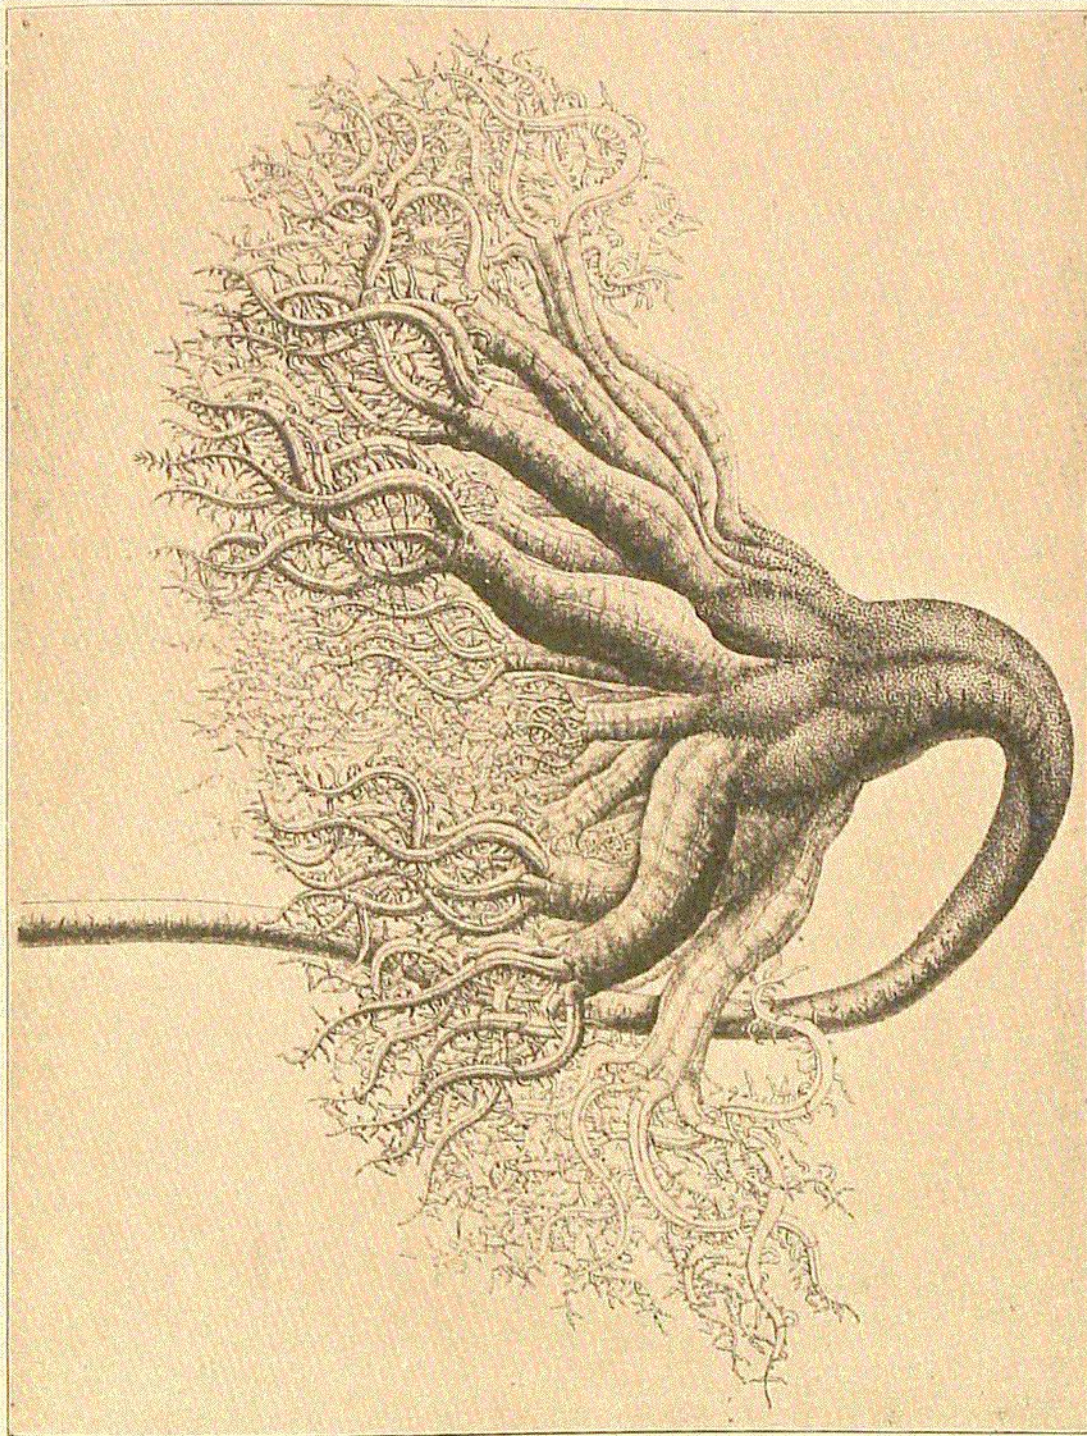

Fig. 358. *Umbellula encrinus*, Cuv. Upper part. (After Danielssen and Koren.)

its relative of the plateaus and coasts), and in smaller quantities the semi-transparent *Hymenaster pellucidus* (see Fig. 360). Among brittle-stars the big light-coloured *Ophiocoma borealis* and the smaller gray *Ophiocoma sericeum* (also found along the coasts, though in a slightly different variety) are in greatest
