

Fig. 4. Right femur.

Fig. 5. Right fibula.

Fig. 6. Right tibia.

Fig. 7. The innominate bones of the female Thylacine—inferior aspect.

(a) The cartilaginous nodules, which represent the marsupial bones. They are apparently a direct continuation upwards of the cartilage which intervenes between the ossa innominata at the symphysis pubis.

(b) Ligament connecting the marsupial cartilage with the pectineal eminence.

In concluding this Report the author feels under heavy obligations to the gentlemen who have so faithfully delineated the various objects in the accompanying plates. More especially is he indebted in this respect to J. Dunlop Dunlop, M.B. (now in Adelaide, Australia), who has contributed eight plates, and to Arthur Thomson, M.B., Senior Demonstrator of Anatomy in the University of Edinburgh, who has executed two plates, and at the same time superintended the drawing of the Plates XII. and XIII. by Mr. T. Lauder Sawers. As already stated, the plate representing the feet of the Koala and the Virginian Opossum is the work of Alfred H. Young, F.R.C.S., of Manchester, and was drawn from his own dissections.
