

VIII. THE RED SEA.

This has been separated as a distinct region, since it seems to contain several peculiar forms.

| | |
|---|---|
| <i>Octopus vulgaris</i> (also I. III. IV. V. VI. VII. IX. X. XIII.). | <i>Sepia rouxii</i> (also IX.). |
| „ <i>horridus</i> (also VII.). | „ <i>elongata</i> . |
| „ <i>macropus</i> (also V. VI. IX. X.). | „ <i>lefebrei</i> . |
| <i>Sepia savignyi</i> . | „ <i>gibbosa</i> . |
| | <i>Sepioteuthis loliginiformis</i> (also VII.). |
| | <i>Loligo arabica</i> . |

IX. THE INDO-MALAYAN REGION.

This province I regard as extending from the Red Sea eastward and northward somewhat further than the Island of Formosa, and as including the Philippines, Papua and all the Malay Archipelago. Probably a portion of the northern coast of Australia should be added, as is done by Fischer, but of this I am not certain.
