

PLATE XI.

Figs. 1, 2. CIRROTEUTHIS MEANGENSIS, n. sp., . . . . .

PAGE

63

Fig. 1. Front view of right dorsal arm, showing the attachment of the web to it, and the nodule on its ventral aspect ; natural size.

Fig. 2. View of the ventral side of the distal half of the same arm, showing the cirri continued to the extremity of the arm, and the nodule, with the margin of the web passing over it ; magnified about 2 diameters.

Figs. 3-5. CIRROTEUTHIS MAGNA,<sup>1</sup> n. sp., . . . . .

60

Fig. 3. Ventral view of the animal ; the greater part of the ventral side of the umbrella has been removed, and also the proximal portions of the two ventral arms. The distal margin of the membrane has been erroneously restored under the impression that the specimen was to be referred to the genus *Stauroteuthis* (see p. 61) ; natural size.

Fig. 4. Distal portion of an arm, showing the suckers and cirri ; enlarged about 3 diameters.

Fig. 5. Central portion of umbrella and mouth, showing the proximal suckers and cirri ; natural size.

<sup>1</sup> The name has been changed since the plate was printed off.
