3 Punctata, Risso	. . . Id.	3 Littoralis, Muller	. . . Nizza
4 Acutifrons, Desm.	. . . Napoli		

As genera incertæ sedis are given *Hexona* and *Zuphea* of Risso, with their respective species *Parassitica* and *Sparicola*. An addendum is given *Generi Amphithonotus. Guttatus*, A. Costa, Napoli.

Among the Asellidæ, Leach, are placed *Apseudes*, Leach (*Eupheus*, Risso), with the species *ligioides*, Risso; *Tanais cavolini*, Edw.; *Oliska penicillata*, Risso. The Pranizidæ, Hope, contain eleven species of *Praniza*, and *Ancaeus forficularis*, Risso.

The first Amphiopod-species described, and the only one figured, is " *Callisoma Hopei*, A. Costa," fig. 2. This is considered by Boeck as the type species of Costa's genus *Callisoma*; but the description says " Secunda haec generis *Callisoma* species facile a C. punctato distinguatur corpore minus elevato; colore roseo vel subflavescente immaculato; epimeris quarti articuli thoracis inferne postice ad illorum quinti articuli medium marginis inferioris, neque ad angulum infero-posteriorem usque productis. Long. lin. 2." The *Callisoma punctatum*
