

## 1875? MAITLAND, R. T.

Naamlijst van Nederlandsche schaaldieren. Tijdschrift der Nederlandsche Dierkundige Vereeniging. Eerste Deel. 'S Gravenhage, Rotterdam, 1875? pp. 228-269.

The Amphipoda, pages 241-246, include the names and localities for species of Gammarina numbered 45-60, one of the Hyperina, 61, and Caprellina numbered 62-68. For *Gammarus fluvialtilis*, Roesel, Maitland gives the locality as "Onder steenen in een helder stroomende beek buiten de tolsteeg-barrière nabij Utrecht en in't Gein bij Abkoude." Of *Gammarus pulex*, Fabr., he says, "In groote menigte in bijna alle slooten en staande wateren onder steenen en balken, tusschen waterplanten enz. zeer gemeen." *Lysianassa*, Edw., he naturalizes into *Lijsianassa*. "*Amphitoë* Jurini, Edw." he gives doubtfully. He retains the name *Leptomera* in place of the earlier *Proto*. "*Caprella acutifrons*, Edw. III, pag. 108, No. 5. Bate & Westw. II, p. 60," he also gives doubtfully, and likewise "*Caprella obesa*, v. Bened." Of "*Naupridia tristis*, v. Bened.," he is doubtful. He closes the list with "*Cyamus*, Lam. 68. ceti. Lin. Edw. III, pag. 113, No. 1. Bate & Westw. II, p. 85. Walvischluis. Op een vinvisch, Balænoptera rostrata, den 10 Dec. 1862 in 't IJ, nabij Zaandam, gestrand." It would have been interesting to have had some description of this *Cyamus*, since Lütken in 1873 says that "hitherto not a single species has been found on a genuine Fin-whale (*Balænoptera*), although some Fin-whales, for instance *B. Sibbaldii*, have been the object of fishery, and the opportunity has been used for looking after parasites. See S. Hallas, Vidensk. Medd. fra den naturhist. Forening for 1867, p. 162."

Among the Isopoda, after *Anceus* is given on page 248, "*Pterygocera* Latr. 76. arenaria. Latr. Zandpissebed. Slabber. bl. 92, Pl. XI, Fig. 3, 4. Aan de kust van Walcheren (Slabber.) N. B. Waarschijnlijk de larve toestand cener *Idotea*-soort." It is curious that in Slabber's own country he should not have accredited to him the specific name which he gave to this now well-known Amphipod, *Haustorius arenarius*.

## 1875. MARTENS, EDUARD VON.

Crustacea. The Zoological Record for 1873; being Volume tenth of the Record of Zoological Literature. London, M.DCCC.LXXV. pp. 183-196.

*Thaumatops* is suggested in place of *Thaumops* as the name of the Hyperid (*Cystosoma*) [*Cystisoma*] described as a new genus by Willemoes Suhm. Hesse's *Ichthyomyzocus*, 1873, is criticised.

## 1875. METZGER, A.

Jahresbericht der Commission zur wissenschaftlichen Untersuchung der deutschen Meere in Kiel für die Jahre 1872, 1873. II. and III. Jahrgang. Berlin, 1875. (With second Title page); Die Expedition zur physikalisch-chemischen und biologischen Untersuchung der Nordsee im Sommer 1872. Die Resultate der Beobachtungen an den Stationen der deutschen Ostsee- und Nordsee-Küsten in den Jahren 1872, 1873. Berlin 1875.
