¹ On p. 314, line 34, for *Gaimardi* read *Gaimardii*.² If Boeck be right in stating, De Skand. og Arkt. Amph., p. 57, that Stimpson's *Pseudopthalmus limicola* can scarcely be separated from *Ampelisca tenuicornis*, Liljeborg, the specific name *limicola* has the priority.³ This species makes a near approach to *Ampelisca carinata*, Bruzelius; on p. 1061, line 27, for upper antennæ, read lower antennæ.⁴ May not this be the same as *Amphilochus tenuimanus*, Boeck?
