

PLATE I.

Figs. 1-1*a*.—*Eudendrium vestitum* (p. 3).

Fig. 1.—A colony of the natural size, attached to an echinus spine.

Fig. 1*a*.—A portion of a colony ; magnified about 25 diameters.

Figs. 2, 2*a*.—*Stylactis vermicola* (p. 2).

Fig. 2.—Part of a specimen of *Lætmonice producta*, seen from the dorsal side after the removal of one of the series of dorsal plates in order to expose the colony of *Stylactis vermicola* which had attached itself to the back of the Annelid ; natural size.

Fig. 2*a*.—A portion of a colony, with hydranths and gonophores ; magnified 20 diameters.
